

Milkweeds (Asclepias spp.) are herbaceous perennial plants named for their milky sap. These plants occur in a wide range of habitats, including intact natural communities on roadsides and highly disturbed roadsides. As required host plants for monarch (Danaus plexippus) caterpillars, milkweeds play an essential role in the butterfly's life cycle (see reverse). Vegetation management that allows milkweeds to persist can support monarchs. This guide can help you recognize the most common native species found on roadsides in your region.

The most common milkweeds in roadsides in Iowa & Minnesota (in alphabetical order):

PLANT: One to many upright branched stems; smooth or with short hairs. **LEAVES:** Opposite; lance-shaped or narrow; with few short hairs. **HABITAT:** Moist prairies, marshes, ditches, edges of ponds, lakes, streams. **SOILS:** Silty to loamy or clayey; moist-wet, tolerates some mesic. **BLOOM:** Jul-Aug; light to dark pink or rose purple.

PLANT: One to many stout, upright, unbranched stems; usually with short dense hairs. **LEAVES:** Opposite; oval-shaped; hairy underneath. **HABITAT:** Prairies, old fields, railways, open woods, flood plains, disturbed areas. **SOILS:** Sandy to loamy, clayey or rocky; dry-wet. **BLOOM:** Jun-Aug; pink.

PLANT: One to many spreading to upright stems; with short hairs; lacks milky sap. **LEAVES:** Alternate; lance-shaped; hairy underneath. **HABITAT:** Prairies, old fields, open woods. **SOILS:** Sandy, loamy, rocky; dry-mesic. **BLOOM:** Jun-Aug; orange to red or yellow.

PLANT: One to several upright, unbranched stems; with short hairs. **LEAVES:** Whorled; narrow to needle-like; smooth or with short hairs. **HABITAT:** Prairies, open woods, fields, flood plains, railways. **SOILS:** Sandy, rocky, clayey; dry-mesic. **BLOOM:** Jul-Sep; white to green.

Most common milkweed species continued

PLANT: Multiple unbranched spreading to upright stems; with short hairs. **LEAVES:** Opposite; either lance-shaped or oval-shaped; with edges folded upward or wavy. **HABITAT:** Prairies, old fields, dunes, openings in forests. **SOILS:** Rocky, sandy; dry-dry-mesic. **BLOOM:** Jun-Jul; light green to yellowish green.

THE MONARCH BUTTERFLY LIFE CYCLE 1 Egg 3-5 DAYS 2 Larva 10-14 DAYS Caterpillar grows by molting 5 INSTARS 3 Chrysalis 10-14 DAYS

Multiple generations of monarchs are produced over the spring and summer, with the fall generation migrating to overwintering sites. You can monitor monarchs or milkweeds; see Additional Resources above.

Less common roadside milkweeds:

Green milkweed (A. hirtella)

PLANT: Upright, unbranched stems; 3' max. **LEAVES:** Alternate; long and narrow to lance-shaped; with short hairs. **SOILS/HABITAT:** Sandy to rocky

or clayey; prairies, open woods, disturbed areas. **BLOOM:** Jul-Aug; green with purple or cream.

Oval-leaf milkweed (A. ovalifolia)

PLANT: Upright, unbranched stems; with fine hairs; 2' max. **LEAVES:** Opposite; lance-shaped to oval-shaped; fine hairs underneath.

SOILS/HABITAT: Sandy, silty, loamy; dry; prairies, open woods. **BLOOM:** Jun–Jul; cream or white with pink or yellow.

Showy milkweed (A. speciosa)

PLANT: Stout upright, unbranched stems; hairy; 5' max. **LEAVES:** Opposite; oval-shaped; hairy. **SOILS/HABITAT:** Sandy to loam;

dry-moist; prairies, old fields, edges of rivers, ponds, disturbed areas. **BLOOM:** Jun-Aug; pink and cream or white; flowers are the largest of American species.

Prairie milkweed (A. sullivantii)

PLANT: Stout, upright, unbranched stems; smooth; 4' max. **LEAVES:** Opposite; lance- to oval-shaped; very smooth. **SOILS/HABITAT:**

Sandy, clayey, or loamy; mesic-moist; prairies, wet meadows. **BLOOM:** Jun-Aug; pink with light green or purple.

Additional milkweeds in Iowa and/or Minnesota: *Asclepias amplexicaulis, A. engelmanniana, A exaltata, A. lanuginosa, A. purpurascens, A. quadrifolia, A. stenophylla.*

Maps & Distribution Data:

These profiles are derived from regional floras and field guides and Woodson's *The North American Species of Asclepias* (1954). Most common species are abundant across both states and are found in roadsides. Less common species might not occur in both states, have a limited distribution across a state, or may be less common in roadsides. Additional species may be uncommon in roadsides, have a small distribution in a state, or are uncommon or rare. The range maps indicate counties where species have been observed (but may be incomplete), and were created by USDA-NRCS using the latest data from the USDA's PLANTS database (https://plants.sc.egov.usda.gov).
